

THE ABC OF IIYAMA - how to find your ProLite?

Panel type? Resolution? Stand type? - our model names will tell you all of that and more about the basic specification of each product. Below you will find a practical guide explaining how to read them.

E-SERIES MONITORS

The E-series monitors, providing great value for money, are the perfect choice for home users. The monitors are fitted with the latest high quality LED backlit TN panels offering very good image quality combined with low power consumption. As TN panels guarantee extremely fast response time, the E-series monitors are most suitable for watching videos and even playing games.

TN panel

TN is the most common LCD technology. TN panels offer fast response time, good overall performance and attractive price-point. In combination with LED backlight, TN technology guarantees high brightness and low power consumption.

ACR (Advanced Contrast Ratio)

Contrast Ratio is a measurement of the difference between the darkest black and the brightest white your monitor can display. Advanced Contrast Ratio is a feature that automatically adjusts contrast and brightness of the screen to assure perfect picture quality while watching films and playing games.

VESA

VESA mount compliance allows you to organise your desk work space by utilising a space saving stand or monitor arm.

The easy to set-up iiyama stands and arms offer broad adjustment capabilities, including tilt, swivel, height and rotation, so you can easily adjust the position of the screens to your preferences assuring comfortable, healthy and ergonomic body posture.

B-SERIES MONITORS

Iiyama B-series monitors come equipped with a number of features to help you create a workspace that best fits your needs. The stand of the monitor is height adjustable ensuring perfect posture and optimal viewing which makes it ideal for long term usage. The B-series guarantees high performance, ergonomic design and power efficiency taking your professional experience to the next level and helping reduce the total cost of ownership.

HAS

A Height Adjustable Stand allows you to set the perfect position of the screen ensuring ergonomic posture and optimal viewing comfort which benefits not only your health but also productivity.

PIVOT

Screen rotation means you can change the position of the screen from landscape into portrait. This feature can be handy whilst working with long spreadsheets or texts.

Sustainability / Power saving features

Reducing the environmental impact of our products starts with the product design phase. Design dictates the quantity of raw materials, type and recyclability of materials, energy consumption required for manufacturing and use, and the ease of recycling. All our products comply with the RoHS (Restriction of Hazardous Substances) directive. Most of our products are TCO, ENERGY STAR® and EPEAT qualified. These are all comprehensive environmental ratings that help identify greener electronic equipment.

X(B)-SERIES MONITORS

The X-series monitors come with top-class features and deliver best-in-class performance. Incorporating the latest IPS or AMVA technology along with multiple inputs, the displays offer supreme colour performance and optimum compatibility across a broad range of multi-media devices. They assure consistent and accurate colour reproduction from all viewing angles. The image is clear and blur-free as the panels can process high speed signals without data loss. The X-series monitors are a huge hit with demanding users like photographers, graphic artists and DTP professionals.

VA

VA technology offers higher contrast, darker blacks and much better viewing angles than standard TN technology. The screen will look good no matter what angle you look at it. VA technology is the best choice for almost any professional application.

IPS

The IPS panel technology guarantees consistent colour reproduction with wide viewing angles and high contrast and is therefore especially recommended for graphics design and other applications which require colours to be displayed accurately. The response time of the panel allows for smooth playback while watching films and playing games, making the IPS the best all-round technology suitable for both business and home use.

Inputs (HDMI/DisplayPort)

A wide range of digital video inputs assures compatibility with multiple platforms. The X-series are all provided with multiple inputs including HDMI, DisplayPort and USB-C. They can be used with any laptop, MAC or desktop PC.

USB C dock

The dock allows you to connect your laptop with a single cable to the monitor to both make sure it is charged and connected to a wired network and signal from the laptop is sent to the monitor. A second monitor can be connected to the DisplayPort (MST) output to create a multi-monitor set-up. With additional USB-ports, your mouse, keyboard or webcam can also be connected to the monitor.

All thanks to a single cable connecting your laptop to the USB C dock in the monitor.

*functions vary depending on your laptop USB-C support.

SCREEN RESOLUTION

The screen resolution is the number of distinct pixels that can be displayed in width and height. The higher resolution, the more information can be accommodated on the screen.

LEGEND
